

SB Naturamin Plus

100% plant available amino acids plus essential turf trace elements

Description

SB Naturamin Plus, 100% natural L-form plant available amino acids combined with essential trace elements optimised for maximum uptake in amenity sports turf. These 20 essential Amino acids are the very building blocks plants use to make proteins, peptides, hormones, defensive compounds, specialised metabolites and many other organic compounds. Providing them in a readily available format allows important plant processes to happen instantaneously, eliminating incidences of abiotic stress, boosting chlorophyll production and boosting photosynthesis.

Anti-Stress

Amino acids help regulate water balance within turf grass and increase water uptake thus boosting osmoregulation during periods of drought. 100% free L-form amino acids, this isomer is the active substance that allows plants to recover from critical stress situations.

Boost Photosynthesis

Amino acids are fundamental metabolites in the process of plant tissue and chlorophyll synthesis. Increasing chlorophyll production, in turn boosting photosynthesis and providing more plant energy to carry out natural daily functions efficiently.

Direct Food Source

Amino acids are the building blocks of all life. Turf grass can assimilate amino acids instantly without needing to be converted into more plant available forms first like most synthetic nitrogen.

Specifications

SB Naturamin Plus W/V%

Free amino acids = 40% (100% L-Form)

N = 7.5%

B = 0.13%

Cu = 0.12%

Fe = 1.24%

Mn = 0.175%

Mo = 0.05%

Zn = 0.25%

Storage: Store in dry conditions

Application

1-5L/Ha

Compatibility

For details of compatibilities, contact your Soil Biology Ltd representative
Soil Biology Ltd, Unit 30
Branbridges Industrial Estate, East Peckham TN12 5HF Tel: 01892 883759 info@soilbiology.uk

For additional technical advice contact: Hillery Murphy 07342 640650
